

Affordable, App-based Vaccine Verification for Employers

Your Digital Vaccine Verification Solution

With our Healthy Ways® digital platform, employees can use the app to upload vaccine cards (or medical/religious exemptions) and company approved ID. Our healthcare staff takes it from there by verifying the information and generating a digital pass through the app to their smartphone. The process is as simple as 1-2-3:

Dashboards and Incentives

As an employer, you can access population status using a real-time dashboard, or data can be shared through an API or other HIPAA approved system.

You can even add Incentives to the process. Your employees will enjoy claiming incentives through the app instantly using our integrated gift card fulfillment capability.

Real-Time Updates and Push Notifications

If verified booster shots are needed in the future, Healthy Ways® has you covered. Our process tracks the type and date of each vaccine administered. This enables Healthy Ways® to send friendly reminders to employees informing them when/if they are eligible for boosters. Employers are also notified if employees are no longer compliant with company vaccination policies.

Customized COVID-19 Content

As part of our vaccination verification experience, your employees will get COVID-19 related articles and information from our vast COVID-19 content library. You, as the employer can even serve your own content, reminders, tools or resources. Want to private label or add your employer logo and colors? Healthy Ways® can do that too.
